AS SCAN

AS SCAN is a modern and high tech engineering company with 30 highly qualified employees. AS SCAN has extensive experience in steel structures, engine and hydraulic installations, and deliveries to the Navy, offshore, district heating sector and the wind industry. The company has CNC machines with CAD / CAM systems.

AS SCAN Hvide Sande was established in 1960 and functioned as a supplier of technical solutions as the fishing industry was at its highest in Denmark. After the decline in the fishery, the subsequent development of the quota system and the development of fisheries as an effective industrial unit with fewer and larger vessels, we decided to focus on other types of ships and energy solutions to the industry.

AS SCAN evolved from being a local fishing gear provider to become an export oriented company with several products for various industries and markets worldwide.

Scan Industries

Scan Industries is your new partner in the energy sector. Scan Industries started in 2010 with the sale and installation of high voltage electro boilers. Since 2010 Scan Industries has grown rapidly and several other agencies and products have emerged.

Our clients choose Scan Industries because we design, install and services all the products we sell. It means a lot to our customers and we prioritize the subsequent after-sales very high.

At Scan Industries we follow our projects very close and all our engineers are both practically and technically educated, which means a lot in both the design and installation phase.

Our service technicians are all trained in the products we sell in order to ensure proper installation and subsequent servicing. At Scan Industries the customer's needs are important, therefore we do many customized solutions together with our customers.

Agencies

✦ At Scan Industries

We have several agencies including a wide range of products. Identical for them all is that Scan Industries do not only sell the products, we install them and perform service and after sale as well.

Engineering

Installation

After Sale Service

1 PARAT Halvorsen electrode Boiler

PARAT's high-voltage boiler supply both steam and hot water up to 50MW - 75 tons of steam / hour. The boiler requires limited space in relation to the power performance and requires no additional safety protective enclosure. The boiler can go from its extremely low idle consumption to full load in under 30 seconds and is therefore very suitable for the Danish balance market. The boiler control is extremely flexible and the boiler can be set to all possible modes of operation, both national and international. For more info please see www.as-scan.com or www.parat.no.

2 High Temperature heating Pumps from Ochner

The need for heat pumps with high temperatures is strong and growing. OCHNER has therefore developed a new Industrial series that meets the high demands of temperature, power and COP. OCHNER is a high-quality Austrian product, which is designed for the heavy industry and is therefore well suited for Scan Industries. Since the hot water supply up to 75-95 ° C by heat source of 40-50 ° C, the heat pumps can be connected directly to the district heating system and be used as booster pumps. Scan Industries has obviously Agency throughout the complete product range from OCHNER and delivers therefore also smaller plants.

For more info please see www.as-scan.com or www.ochsner.com.

3 Digital Airless Multipoint SCR system from Dansk Teknologi

BLUNOX Digital Airless Multipoint SCR system for stationary applications outperform traditional SCR systems and have several distinct benefits. The system has a 95% Nox reduction in order to ensure compliance with the strictest emission legislations. It has no extra fuel consumptions, has low installations cost due to the design, and is so compact that it will fit into the engines existing space.

For more info please see www.as-scan.com or www.dansk-teknologi.dk.

4 Water treatment from Grünbeck

Water is their passion and for many years Grünbeck has been one of the most successful and reputable companies for water treatment in Europe. This sentence was one of the reasons why Scan Industries contacted Grünbeck in order to apply for Agency. Another was the growing requirement for water treatment plants for heavy industry. Scan Industri and Grünbeck had selected a range of products that fits into the market were Scan Industries already supply other products.
